## IN THE CLAIMS

This listing of claims replaces all prior listings:

1-4. (Canceled).

• • •

- 5. (Currently Amended) A liquid crystal display as set forth in claim 2, device employing a normally black mode, the liquid crystal display device comprising:
  - a pixel having a reflection portion and a transmission portion;
- a first polarization plate on a viewing surface side on a viewing surface side of the liquid crystal display device;
- a phase difference plate on the viewing surface side of the liquid crystal display device; and
  - a second polarization plate on a back surface of the liquid crystal display device,
- wherein an orientation mode of a liquid crystal of the liquid crystal display device is a twist orientation,
- wherein a ratio dt/dr between a gap dt of said transmission portion and a gap dr of said reflection portion satisfies a relationship of 1.7≤dt/dr≤2.05, and
- wherein the a phase difference value of said phase difference plate on the viewing surface side at a wavelength of 550 nm is 310 nm or more.
- 6. (Currently Amended) A liquid crystal display as set forth in claim 3, device employing a normally black mode, the liquid crystal display device comprising:
  - a pixel having a reflection portion and a transmission portion;
- a first polarization plate on a viewing surface side on a viewing surface side of the liquid crystal display device;
- a phase difference plate on the viewing surface side of the liquid crystal display device; and
  - a second polarization plate on a back surface of the liquid crystal display device,

**PATENT** 

wherein an orientation mode of a liquid crystal of the liquid crystal display device is a twist orientation,

wherein the twist angle is 30 degrees to 60 degrees, and

wherein the a phase difference value of said phase difference plate on the viewing surface side at a wavelength of 550 nm is 310 nm or more.

- 7. (Currently Amended) A liquid crystal display as set forth in claim 4, device employing a normally black mode, the liquid crystal display device comprising:
  - a pixel having a reflection portion and a transmission portion;
- a first polarization plate on a viewing surface side on a viewing surface side of the liquid crystal display device;
  - a phase difference plate on the viewing surface side of the liquid crystal display device; a second polarization plate on a back surface of the liquid crystal display device,
- wherein an orientation mode of a liquid crystal of the liquid crystal display device is a twist orientation,

wherein a ratio dt/dr between a gap dt of said transmission portion and a gap dr of said reflection portion satisfies a relationship of 1.7≤dt/dr≤2.05,

wherein the twist angle is 30 degrees to 60 degrees, and

wherein the a phase difference value of said phase difference plate on the viewing surface side at a wavelength of 550 nm is 310 nm or more.

8-16. (Canceled).

• ;

- 17. (previously presented) A liquid crystal display device employing a normally black mode, the liquid crystal display device comprising:
  - a pixel having a reflection portion and a transmission portion;
- a first polarization plate on a viewing surface side on a viewing surface side of the liquid crystal display device;
  - a phase difference plate on the viewing surface side of the liquid crystal display device;
  - a second polarization plate on a back surface of the liquid crystal display device,

wherein an orientation mode of a liquid crystal of the liquid crystal display device is a twist orientation,

. . . . . .

wherein a ratio dt/dr between a gap dt of said transmission portion and a gap dr of said reflection portion satisfies a relationship of 1.7≤dt/dr≤2.05, and

wherein the a phase difference value of said phase difference plate on the viewing surface side at a wavelength of 550 nm is 310 nm or more.
